SUMMARY

Final-year Computer Science undergraduate with six months of industry experience in cloud infrastructure automation and software development. Practical background spanning Infrastructure as Code and CI/CD on Azure, alongside full-stack web and mobile development.

WORK EXPERIENCE

AEM ENERSOL SDN BHD

Kuala Lumpur, Malaysia

Software Engineering Intern (DevOps)

Mar 2026 – Aug 2026

- Migrated Azure infrastructure for two existing production systems into version-controlled Terraform, bringing 155 resources across seven logical layers under Infrastructure as Code for the primary system
- Reverse-imported live production resources using aztfexport on a strictly read-only basis, filtering a 730-entry export down to the 11 resources actually deployed for the second system
- Built Azure DevOps YAML pipelines authenticating via OIDC workload identity federation, removing the need for stored service principal credentials, with Azure Blob Storage remote state and lease-based locking
- Ran a full destroy-and-rebuild recovery exercise reproducing 136 resources in an isolated test environment, and reconciled three resources that had drifted outside Terraform's view
- Identified and remediated two plaintext credential exposures introduced by export tooling before either reached version control

INARI AMERTRON, PLANT 13

Penang, Malaysia

Testing Engineer Intern

2022 – 2023

- Performed testing, calibration, and preventive maintenance on semiconductor manufacturing equipment, and documented testing procedures to support quality control

EDUCATION

UNIVERSITI TEKNIKAL MALAYSIA MELAKA (UTeM)

Melaka, Malaysia

Bachelor of Computer Science (Software Development) | CGPA 3.57/4.00

Expected Nov 2026

Relevant coursework: Software Engineering, Data Structures & Algorithms, Database Management, Mobile Application Development, Software Management, IoT Systems

UNIVERSITI TEKNIKAL MALAYSIA MELAKA (UTeM)

Melaka, Malaysia

Diploma in Computer and Electronic Engineering | CGPA 3.50/4.00

Jun 2019 – Jun 2023

PROJECTS

Nanaslah — Entrepreneur Information Application (SULAM × LPNM)

2025

- Built a cross-platform mobile application using JavaScript, Capacitor, Firebase Authentication, and Cloud Firestore for entrepreneurs in Malaysia's pineapple industry
- Delivered entrepreneur directory, category-based announcements, admin dashboard, and WhatsApp integration; awarded 2nd Place in collaboration with Lembaga Perindustrian Nanas Malaysia

SISEOA — Smart IoT System for Energy Optimisation and Automation

2025

- Developed a cloud-connected energy management system integrating web, mobile, and Raspberry Pi components for real-time monitoring and automated device control
- Implemented energy analytics, cost calculation against TNB tariff data, and scheduling; deployed cross-platform using React.js, Capacitor, and Firebase

SKILLS

Cloud & DevOps: Terraform, Microsoft Azure, Azure DevOps Pipelines (YAML), Docker, Git, CI/CD, OIDC authentication, Infrastructure as Code

Languages: JavaScript, SQL, C++, HTML/CSS

Frameworks & Tools: React.js, Capacitor, Firebase, MySQL, Linux, Android Studio, Visual Studio Code, GitHub

ACHIEVEMENTS & LANGUAGES

Achievements: 2nd Place — UTeM SULAM (2025) | 2nd Place — UTeM Workshop 2 Competition (2025) | Bronze Medal — INOTEK Competition (2022)

Languages: English (MUET Band 4) and Malay — fluent
